

Châu Quốc Thắng

Ho Chi Minh City • cqt282@gmail.com • 0906903502

Software Engineer with three years of experience specializing in backend development. Proficient in Go, with a strong focus on API design, system efficiency, and real-time applications. Skilled in integrating third-party services, optimizing performance, and building scalable, high-performance systems.

EDUCATION

Bachelor of Software Engineering
VNU-HCM University of Information Technology

Aug 2018 - Dec 2022

SKILLS

Programming Languages: Go, Python
Web Frameworks: Gin, gorilla/mux, Fiber
Databases & Storage: PostgreSQL, MongoDB, Redis
Authentication & Security: JWT, OAuth2, 2FA
API Development: RESTful APIs, gRPC, WebSockets, GraphQL
Other tools: Docker, Kubernetes, Helm, Prometheus, GitLab CI/CD, Argo CD, SonarQube
Languages: Vietnamese(Native), English(Proficient)

WORK EXPERIENCE

Software engineer
TMA Solutions

Oct 2021 - Present
Ho Chi Minh City

- Instant Driving Lesson:** A mobile app that connects learners with driving instructors, allowing them to book lessons in real-time. (Aug 2024 to Present)
 - Main contributions:**
 - Designed and set up the initial codebase using Clean Architecture.
 - Integrated SonarQube to improve code quality.
 - Set up GitLab CI/CD for automated builds.
 - Developed key features:
 - Matching algorithm to connect driving instructors with learners.
 - JWT authentication for secure user access.
 - Wallet system for funding and instructor payouts via Stripe API.
 - Chat feature for communication between learners and instructors.
 - Live session tracking using WebSockets.
 - Push notifications via Firebase Cloud Messaging for session updates and bookings.
 - Location search using Google Maps API.
 - Technologies:** Go, Gin (HTTP framework), gRPC, PostgreSQL, Redis, Google Maps API, Stripe API
- Network advisor:** A real-time system that monitors network devices, detects errors, and suggests automated fixes. (May 2023 to July 2024)
 - Main contributions:**
 - Migrated legacy services written in Python to Go
 - Designed and implemented a feature that allows user to execute custom Python script to fix error.
 - Automated Kubernetes (k3s) cluster setup for on-premise deployments.
 - Implemented 2FA to enhance system security.
 - Technologies:** Go, Python, MongoDB, Redis, rsyslog, k8s
- Truck Fleet Management:** An enterprise mobile app for transport companies to track and monitor truck conditions, driver work hours. (Oct 2022 to April 2023)
 - Main contributions:**
 - Integrated HERE Map API to get real-time route scheduling and traffic updates.
 - Sends notification alerts for truck maintenance, speed violations, or critical telemetry readings (speed, weight, tire conditions)
 - Developed cron jobs to process periodic truck data and driver location reports.
 - Technologies:** Go, PostgreSQL, Redis, Docker, HERE Map API
- Business Easy Loan:** A mobile app to streamline the loan application process for small and medium businesses. (Oct 2021 to Sept 2022)
 - Main contributions:**
 - Developed the mobile app using Flutter, integrate Android biometrics API to enhance the app's security.
 - Integrated Firebase Analytics to collect and analyze users' behavior.
 - Participated in UI/UX discussion with designers to build a intuitive yet simple UI for easier loan process.
 - Created various REST APIs for the mobile app to collect user's business information.
 - Technologies:** Flutter, Java Spring, Firebase, MySQL, Kafka, AWS S3
